

Moon Math

Place a paperclip in the center of the circle. Use the point of a pencil to hold the paperclip in place. With your other hand, flick the paperclip so that it spins around the circle. Note how many moons are in the quadrant where the clip lands. Create a math equation with each pair of spins around the moon math circle.

$$\begin{array}{c} \text{moon} \text{ moon} \text{ moon} \text{ moon} \end{array} + \begin{array}{c} \text{moon} \text{ moon} \end{array} = \begin{array}{c} \text{moon} \text{ moon} \text{ moon} \text{ moon} \text{ moon} \text{ moon} \end{array}$$

$$\underline{\hspace{2cm}} \begin{array}{c} \square \end{array} \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\underline{\hspace{2cm}} \begin{array}{c} \square \end{array} \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\underline{\hspace{2cm}} \begin{array}{c} \square \end{array} \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\underline{\hspace{2cm}} \begin{array}{c} \square \end{array} \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\underline{\hspace{2cm}} \begin{array}{c} \square \end{array} \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$
